

The most advanced solutions from Pittsburgh's oldest pest control company.

Pest management is not a job for amateurs. Our professionals use state-of-the-art technology to help businesses nationwide meet environmental concerns and all government regulations.

What makes Witt different?

Our unique comprehensive pest management program includes:

- detailed prevention measures for your facility.
- customized interactive reporting.
- Web site communication network for your management team.
- secure and safe storage of sensitive and vital information.
- the ability to comply with federal, state, and local laws, regulations, and product standards.
- centralized billing.
- our on-going commitment to protect your company's reputation.
- QualityPro certification by the National Pest Management Association.

Integrated Pest Management—our way.

Other companies analyze and treat pest problems with the same methods that have been around for decades. While their approach to problems may be moderately effective, they're largely inefficient—and in many cases, unnecessary.

By comparison, Witt provides an Integrated Pest Management program we call

SmartPM. SmartPM is a more comprehensive and cost-effective way to combat pest problems where pesticides are not used unless absolutely necessary. SmartPM emphasizes long-term, preventive strategies to resolve current or potential pest problems.

Our technicians will thoroughly inspect, carefully monitor and attempt to use non-chemical methods to prevent pest problems. For example, properly sealing cracks and crevices will eliminate places where pests enter or hide. In most cases, this will eliminate the need for pesticide use in these areas.

SmartPM safeguards the health and productivity of your employees, while protecting the purity of raw materials and the integrity of the finished product.

Using SmartPM, our technicians will:

- make a comprehensive analysis of your facility.
- provide a detailed report that outlines your specific needs.
- install all appropriate pest control equipment—early insect and rodent warning devices, bait replacement programs, and mechanical traps.
- provide chemical treatment, when and where necessary.

The green way to be pest-free

SmartPM-Green is the most advanced, environmentally responsible pest control program available in the industry and it's one of the few Green Shield Certified programs in the country.

Other companies may advertise an "eco-friendly" service, but SmartPM-Green truly delivers a green pest management solution. Our technicians will use non-chemical approaches as the first line of defense against pests. Only when necessary, low-impact or natural pesticides which have been Green Shield approved (criteria based on active ingredients, toxins, warning labels, method of application, etc.) will be used.

Modeled after SmartPM, SmartPM-Green uses pro-active, low-risk methods to protect your facility from pest problems. Commercial buildings including "Green Sites" can now benefit with SmartPM-Green, the premier Green pest management program for businesses.

At Witt, our goal is to find and eliminate sources of pest problems, not just the symptoms of pest problems.

Pest control. Peace of mind.

The Green Shield Certified (www.greenshieldcertified.org) credential is offered by the independent, non-profit IPM Institute of North America, which verifies company performance using a rigorous, on-site evaluation that examines 63 separate aspects of the pest control service.
